Air heater

Airflow shut-off valves

SMARTER

series **RD**

The Climtec recuperator removes exhaust air from the premise, keeping it warm in winter or cool in hot weather, while filling it with fresh air from the street. At the same time, the air flows do not mix, but move in different channels of the heat exchanger. Thanks to this, the temperature is transferred from exhaust air to supply air (heat recovery). Due to this, energy recovery efficiency of up to 93% is ensured.

CLIMATE

series

Quattro

A new series of Climtec recuperators that combines ECO materials and modern technologies. The stylish design of the recuperator allows you to fit it into any interior. A feature of the Quattro series recuperators is the front distribution module made of natural wood and possibility of controlling the recuperator using a mobile application. Quattro recuperators are available in Standard and Profi configurations, in three basic colors: natural wood, gray and white. Our additional extended color palette is also present.

Product range Quattro

Recuperator Quattro 100 Standard

Diameter of the working module without insulation, mm	100
Diameter of the mounting hole, mm	112
Voltage, V	220/230

PARTNERSHIP

Automated ventilation system with heat recovery

to maintain a comfortable climate
in any room

Ability to write CLIMTEC/AJAX <READY> system scripts using a mobile application.

When the level of CO₂ increases, the recuperator automatically selects the necessary power to stabilize the air quality.

For existing users of Ajax security systems, who already have a Hub 2 Plus central unit installed, there is also an opportunity to increase comfort in the premises, thanks to high-quality CLIMTEC supply and exhaust systems, by purchasing additional recuperators and sensors and sockets for them and controlling all additional equipment using one application. Conversely, those users who initially purchased and installed the CLIMTEC/AJAX <READY> equipment kit can further increase the security of the premises by connecting the equipment to the security panel.

The ability to connect many devices to one Hub 2 Plus central unit, that is, after purchasing one complete set of CLIMTEC/AJAX <READY> equipment, and installing it in one room, if the system needs to be expanded to other rooms, there is no need to install another Hub 2 Plus central unit. It is enough to purchase additional recuperators and sensors and sockets for them. It can be especially convenient for multi-room premises, both residential and office, as well as in schools, kindergartens, etc.

With the help of a smart Socket, it is possible to remotely turn on/off the recuperator, as well as monitor electricity consumption in the Ajax mobile application.

PASSIVE AIR SUPPLY VALVES

Passive ventilation valves (air vents) are a modern replacement for a through-ventilation hole in the wall and perform a function of passive air ventilation. No need for power supply significantly expands the space for installation and is an excellent budget solution for premises that require more loyal technical conditions of operation and ventilation.

NON-STANDARD SOLUTIONS

THIN WALLS

Climtec recuperators can be installed in rooms with thin walls - frame houses, houses made of SIP panels, as well as houses built using Stald technology.

A specially designed flange allows you to fit the recuperator perfectly into a wall of any thickness.

The flange is made of MDF and can be painted in the color of recuperator, which will perfectly fit into the interior.

Задня решітка може бути пофарбована у колір фасаду

NON-STANDARD SOLUTIONS

EXTENSION AND SWIVEL MODULE

Usually, recuperators are mounted in the wall. However, there are non-standard situations when their installation requires appropriate solutions.

For example, you can mount the recuperator in the ceiling using a technology of extending the pipe and creating a swivel module. A similar solution is often used in private houses when it is possible to run a pipe through the attic.

ADVANTAGES OF CLIMTEC RECUPERATORS

Aluminum heat exchanger:

does not oxidize, works in a wide temperature range, and the oxide film prevents oxidation and, in turn, the appearance of mold. The design of the heat exchanger provides a large heat exchange area.

Air heater:

maintains a comfortable indoor microclimate even in the worst frosts. The heater, which is located after the heat exchanger, reheats the air, thanks to which it has the maximum efficiency of heating with a small consumption power of the heater itself

Airflow shut-off valve:

prevents wind blowing, drafts and noise. It also eliminates the possibility of recuperator freezing at extremely low temperatures. If necessary, airflows can be completely blocked.

WHY CLIMTEC RECUPERATORS IN PARTICULAR?

CLIMTEC decentralized ventilation systems are much more profitable compared to centralized ones. This is due to more compact sizes, ease of installation and maintenance.

Apartments and private houses, schools and kindergartens, gyms, offices and production facilities - recuperators can be installed almost everywhere without the need to design complex ventilation systems.

We recommend installing the Climtec recuperators in the upper part of the wall bordering the street. At the same time, the optimal distance from the ceiling is recommended to be about 30 cm: it is there that recuperators can carry out ventilation as efficiently as possible.

CLIMTEC LTD is a Ukrainian creator and manufacturer of decentralized supply and exhaust ventilation systems with heat recovery.

Climtec recuperators allow you to ventilate the room, maintaining the optimal temperature regardless of what it is outside. The recuperator simultaneously removes exhaust air and supplies fresh air. Thanks to the heat exchange between the exhaust and supply air, the temperature of the room is maintained and the humidity is normalized.

The main advantage of recuperators is their compact size, low price and ease of installation, unlike, for example, centralized ventilation systems. It is enough to make a hole of the required diameter in the wall bordering the street and install the recuperator. The whole process usually takes no more than two hours and does not harm the appearance of the room, perfectly fitting into the existing design.

Climtec™ Recuperators have passed the test of time and received high quality marks from customers who already use decentralized ventilation systems our trademark.

The main tasks that
Climtec™ Recuperators
successfully cope with:

VENTILATION

dust protection
and extraneous odors

**CARE
ABOUT HEALTH**

protection against mold
and its warning

ENERGY SAVING

saving money
during ventilation

For your interior
